

## PROJECT

---

The San Siro neighborhood is characterized by strong multiculturalism but also by shortcomings, including a shortage of places for socialization, especially for young people, and obstacles in socio-educational processes. The project aims to build inclusive and multisensory libraries, as proximity spaces in which reading and storytelling become an experience of growth and aggregation for vulnerable minors. The new offer is designed with sustainability, accessibility and flexibility in mind, thanks to specific design, technology and narratives. This aims to help break down linguistic and socio-cultural barriers, making reading an experience accessible to all.

## IN BIBLIO con CHIARA

Inclusivity and Libraries for a Culture that Invites, Aggregates, Regenerates and Activates
